**Conpatch GC**

**DESCRIPTION**
Conpatch GC is a cementitious one component polymer modified, Silica Fume based gunite repair mortar that cures to provide a durable water resistant high strength material. It is for mechanical application by dry shot guniting and has excellent adhesion. Compiles to EN1504 part 9 and EN1504 part 3.

- Principle 3: Concrete Restoration (CR).
- Method 3.3 - Spraying concrete or mortar.
- Principle 7: Preserving or restoring passivity (RP).
- Method 7.1: Increasing cover to reinforcement with additional concrete or mortar.
- Method 7.2: Replacing contaminated or carbonated concrete.

**USES & ADVANTAGES**
Conpatch GC is for mechanically applied concrete repair work by dry process guniting. The material is used for large repairs to reinforced concrete where there is corrosion to the reinforcement e.g. sea walls, bridge decks, piers, tunnels, viaducts, slab soffits, reservoirs sewers etc. The product is formulated to produce a high build, low rebound, fast strength gain repair which can be applied by standard spraying techniques.

**Advantages include:**
- Chloride free.
- Low drying shrinkage.
- Low rebound & high build.
- High early strength.
- Excellent adhesion to old concrete.
- One component ready to use.
- Limited dust formation.
- Greatly reduced water & carbon dioxide permeability.
- Contains fibres to reduce micro cracking.
- Non toxic.

**APPLICATION INSTRUCTIONS**

**SURFACE PREPARATION**
Good surface preparation is essential to achieve adhesion. Saw cut to the extremities of the repair to a depth of at least 10 mm. to avoid feather edges providing a square edge. Cut out the complete area to a minimum depth of 10 mm. up to the sawn edge. The surface must be clean & free of dust, unsound material, dirt, grease, paint, corrosion deposits, algae etc. Grit or grit/water blasting or scabbling is recommended.

Test surface preparation by pull off tests corroded steel in the repair area must be fully exposed, remove scale or corrosion deposits clean to a bright condition & ensure great attention is given to the back of the steel bars.

**Important Notes**:
- Apply only to clean sound substrates.
- Never apply to dry substrates.
- Always ensure adequate curing of freshly placed gunite.

**PRIMING OF REINFORCEMENT**
Apply one coat of Congard Zinc or Congard ST & allow to dry before continuing. A second coat may be applied if doubt exists to the integrity of the first.

**APPLICATION**
Just before application prewet & wash clean the substrate with water remove any free standing water before application. Pressurised air used for cleaning should be oil free.

Ensure all reinforcement is secure to avoid poor build, compaction & bond.

Apply using suitable guniting equipment & ensure good compaction around exposed rebar. The material may be built up in 9 mm. to 50 mm. sections in one pass.

If sagging occurs remove material.

In dry shot processes the nozzle man will determine the water content & therefore the quality of the material sprayed. A low WC will result in too much dust a high one in slumping.

CONPATCH GC

HIGH STRENGTH, LOW SHRINKAGE, HIGH BUILD SPRAY APPLIED REPAIR MORTAR

FINISHING
Strike off with a straight edge & close with a steel float. Wooden or plastic floats may be used to achieve the desired texture.

CURING
Suitable curing must be undertaken such as plastic sheet, wet Hessian, or a membrane such as Congard Acrylic or Corcure 200.

OVERCOATING WITH PROTECTIVE COATINGS
Remove any curing compounds before applying protective coatings. The repair material is highly durable, however, other areas will benefit from protection via the use of a protective coating. Use Elastoclad anti carbonation coating to produce a barrier limiting the advance of chlorides & carbondioxide.

CLEANING
Conpatch GC should be removed from tools, equipment and mixers with clean water immediately after use. Cured material can only be removed mechanically. Equipment used with Congard Zinc or Congard ST should be cleaned with solvent.

LIMITATIONS
Conpatch GC should not be used when the temperature is below 5°C and falling. Do not mix part bags. The product should not be exposed to moving water during application. Exposure to heavy rainfall prior to the final set may result in surface scour.

PACKAGING
25 kg. 4 Ply plastic lined bags.

STORAGE & SHELF LIFE
Conpatch GC has a shelf-life of up to 12 months in unopened packs kept in a dry store. If high humidity is apparent the life may be reduced to 6-8 months.

HEALTH & SAFETY
Conpatch GC is non-toxic but is alkaline in its nature. When applying gloves & goggles should be worn. Wash off splashes to skin with water. If in eyes wash out with plenty of clean water and seek medical attention.
Conpatch GC is non-flammable.

TECHNICAL SERVICE
The Cormix International Technical Service Department is available to assist you in the correct use of our products and its resources are at your disposal entirely without obligation.
